WELCOME

a LEICHT kitchen realizes the idea of designing the kitchen living space holistically, functionally, and timelessly. As a place of encounter and communication and the preparation of food, the kitchen is of central relevance for people of all cultures.

The kitchen space and the type of furniture itself are an essential part of the architecture for us. The correct ratio of the proportions, the visible surfaces of a kitchen, the volume ratio of the various "furniture carcasses," and the material and color language are of elementary importance for the timeless aesthetic effect of the kitchen space. If these aspects are in harmony, the kitchen is an integral part of the room architecture.

The variety of surfaces and the variability in the dimensions of the furniture from LEICHT create the basis for the necessary planning freedom to meet this requirement.

This individuality and diversity in the product provide the basis for subsequent planning in the adjoining living spaces and living spaces of a house. LEICHT thus creates the planning freedom for the design of the interior and the entire interior design.

PEARL

New Program

New program with metallic background colors that are embedded in a matt, 2mm thick acrylic glass layer. The scratch-resistant anti-fingerprint seal on the acrylic glass surface lets the depth effect of the metallic shimmering surface come into its own flawlessly. Due to the special edging with incorporated bevel in the acrylic glass, each front part appears with a refraction of light along the edge. This light refraction effect is reminiscent of colored matt glass and thus also creates a comparably high-quality appearance, but the front structure of PEARL is much more robust and easier to care for.

The colors of the PEARL program are perfectly matched to our LEICHT range, we offer you two contrasting versions of the collection: The color 070 citrine - a light, friendly and metallic iridescent tone between champagne and morning sunlight, which comes into its own alongside our soft gray tones. In contrast, the color 071 opal - a serious, smoky gray shimmering shade,

which perfectly complements our dark plain colors from fossil gray to slate black and also harmonizes well with warm wood tones. Support plate MDF, reverse side with the same color balancing sheet.

240 PEARL | 440 PEARL-A |
740 PEARL-C | 840 PEARL-E

Front thickness 19 mm
Available colors:
PM 070 citrine
PM 071 opal

SELVA

NEUES PROGRAMM

Laminate composite front with expressive, black matt wood structure, which exudes naturalness due to the deep, vertical embossing despite the lack of wood tones. An elegant shade that gives black a more distinctive character and can therefore be perfectly combined with other dark plain colors or with metallic surfaces.

218 SELVA | 418 SELVA-A | 718 SELVA-C |
818 SELVA-E

PG 2

Front thickness 18,8 mm

Available colors:
KI 242v Virginia oak

COLOR AND DECOR EXTENSION

134 OLIVE GREY

A light but warm gray with a background tone tending towards green. Very effective, especially in contrast to warm wood tones, but also in itself a pleasantly natural and friendly color is expanded for the SIRIUS range.

Programme:
SIRIUS

262 Accent Glass

The support frame of the accent glass front in GAS glass design with black frame imprint has been converted to a black coating.

138 FOSSIL GRAY

We are expanding the color fossil gray, which was already shown in the last collection, for our program. The dark gray tone stands for a rather strong, earthy gray with an umbra colored undertone, which has a harmoniously complementary effect, especially with warm woods..

Programme:
SIRIUS | CERES | BONDI | TOCCO

THE PULL-OUT SYSTEM
THE NEW SUPER THIN FRAME M8

The filigree pull-out system defines an elegant handwriting with its clear and reduced design language and is clearly understated in its visual effect. Our new M 8 frame system achieves this with a wall thickness of only 8 mm, supported by the dark color of the furniture and the hardware system itself.

The filigree look of this frame is only available as a steel version and will be only offered with a dark powder coating in 061 carbon metallic. In contrast to the L3 / M3, the M8 system is guided on Dynapro underfloor rails, which are mounted under the 16 mm thick pull / drawer floor and thus offer a larger usable width of the drawer. Our L-Box and Combo systems as well as anti-slip mats and wool felt pads are available for selecting the interior fittings.

MAXIMUM PLANNING SOLUTIONS

P1 CABINETS

The P1 concept for PRIMO offers you the option of equipping only the upper handle position of base units with a handle. All fronts below are equipped with handle-free technology, i.e. doors with sesame fittings, pull-outs either mechanically with TipSoftclose or electrically with SensoMatic. The P1 concept is particularly suitable in connection with grip profile strips, which then only run through under the worktop. P1 ensures a calm and tidy picture, especially when the front is divided into small parts. Available for base units only. The order type is supplemented with a "P1" in front of the type.

Cabinets & accessories

GLASS ROLLER SHUTTER CABINET

The interior design of our glass roller shutter cabinets EJ ... G was made on a hard More monastic color scheme changed. Instead of the previously used laminate surface with a stainless steel look we now have the three strongest colors of ours Collection K120 frosty white, K273 platinum and K 284 carbon gray for the interior. So the cupboard can now become white kitchens or better for the interior color of the body be planned appropriately.

FOLDING FLAP CABINET - UPPER CABINET

We are now offering the folding flap cabinet with a central front division for the wall cabinet height of 66 cm. OFK... 66 / COFK... 66 / AOFK... 66 Not available for supporting programs.

LEMANS 061 CARBON METALLIC

The Le Mans shelf shelves for the dark 284 carbon gray corpus will be converted to a version with all-round closed steel railing. The previous chrome railing is therefore no longer necessary, which ensures a much more harmonious appearance of the interior of the cabinet. Furthermore, all other visible hardware components are also adapted to the dark carcass.

W6 END PANEL TO W5 PANEL

The miter-glued end panels for all product lines have an optimized structural substructure and thus a new width of 5 cm. The front panels are now hooked into a milled fitting element of the carrier plate and can be adjusted in height afterwards and then fixed with a locking screw. The standard planning dimension of 5 cm is also advantage ous, as it replaces the previous 6 cm TW ...

HK TOP - FLAP FITTING

We are converting the fittings on our flap cabinets to the new HK top generation from BLUM. The new HK top series of fittings fits much more slenderly into the corner on the top panel of the carcass, which is particularly noticeable in the case of small carcasses. We offer the new HK top in all variants: with a handle, with sesame fittings or in a motorized version. The change affects both wall cabinets and device conversion and tall cabinet top-mounted cabinets..

AREA KM

We have expanded our environment in super matt Fenix quality. From the 2022 collection onwards, we will also offer you W2 and W3 side-panel shelves, plinth panels and room sliding doors in KM.

WALL COVERING

In our surrounding range, we now also provide wall cladding panels up to a height of 270 cm. These are available in 1.6 cm side material as well as a front version. The wall cladding in the front version, if it is ordered, for example, with a carcass line division, is delivered in image development for vertically structured colors.

WVSW ..Wall cladding1,6 cm Side (max. 120 cm wide)

WVFSW ... Wall cladding in front execution (max. 120 cm wide)

BASE ADJUSTMENT HOLES

In order to be able to easily adjust the plinth feet from above with the help of a screwdriver, the sub-floors of base and tall cabinets in the standard carcass color are additionally drilled above the rear plinth feet for commissions with a plinth height of <10 cm. We supply color-matched caps to cover the bores. Cabinets and shelves with selectable interior designs as well as sink cabinets with water-resistant bases do not have adjustable plinth holes.

INTERNAL DRAWERS WITH SPACER

Door cabinets, which in their basic configuration are equipped with internal drawers and pulls, can now also be ordered with one-sided distance compensation to the hinge body side via a change type. The side spacer has the advantage that the doors can be equipped with 110° standard hinges, which means that they are less sagging than the 155° wide-angle hinges. The disadvantage is the interrupted appearance between the inner front piece and the body side

but slightly outweighed by the filigree 110° hinge. The wide-angle hinge remains standard.
AN IG E / AN IG D Exchange 155° hinge with 110° hinge with narrower inner drawer / pull

TYPE LOGIC SUMMARIZED FOR panels

To enable easier order processing for panels, we will simplify the type logic for this in the future. Of course, nothing will change in terms of the wide range of planning options. From cover shelves (B * A...), shelves (B * F...), upper floors (B * O...) and sub-floors (B * U...) will in future be floors (B * ...).

Old: B2A58
B3U36
New: B258
B336

VERO EQUIPMENT AND LIGHT

There are now additional equipment options for our Vero tall glass cabinets. In addition to an M8 inner drawer in the surrounding design below the structural intermediate floor, we have developed special wine racks and glass rails made of solid wood for the presentation of your wines or as bar equipment. These can be ordered for the already prepared cabinet, but can also be easily retrofitted on site. Wine rack bases and glass rails are in the designs

oak and walnut available.

Vero inner drawer VE... 58 ISU U, widths 45 - 60 cm
Wine rack base set VE... FW / VE... FWN, widths 45 - 60 cm
Glass rail set VE... FGH / VE... FGHN, widths 45 - 60 cm

In addition, our Vero cabinets also have a new type of LED light source with point-free illumination using chip-on-board technology..

TOWEL HOLDER

An attachable towel holder is now available for CONTINO cupboards. This is equipped with felt strips to protect the edges and can be adapted to any front thickness.

The standard version of the towel holder is 405 stainless steel, for the perfect adaptation to your kitchen planning we also offer the holder in our complete powder coating range.

CHTH 52 ...

Towel holder length 520 mm ...
MS stainless steel
... F powder-coated

L-BOX WALNUT

In the past few years we are seeing an increasing focus on walnut decors and veneer fronts in our kitchens. As a consequence, we have now also adopted the walnut theme in the interior design. For this purpose, we have expanded our L-Box interior equipment system, which is an ideal combination in terms of price / performance and appearance and, with the dark anti-slip mat 161 carbon, offers the ideal color basis for walnut.

Bsp.: LBFSN ... 1 – L-Box
Drawer set 1 in walnut

HFO - Hands Free Open

The latest generation of the HFO is available again with our 2022 collection. The opening support has been technically revised and has not changed in terms of dimensions compared to the previous model. The new HFO is based on laser-controlled opening technology for convenient opening of your recycling system. The ejection strength and sensor sensitivity are configurable, the orientation light can be dimmed / switched off.

REINFORCED LATERAL BASE RECESS

For base and tall cabinets with a side recess in the plinth, we now offer a version with additional reinforcement from a width of 50 cm in order to prevent the base from sagging under heavy loads. For this purpose, two tubular steel profiles are mounted below the sub-floor with flanged steel plates between the floor and sock gliders, thereby transferring the load from the body side directly to the base feet.

TO SOS V
Reinforced base recess on the side, up
r / l
TO SOS V B
Reinforced base recess on both sides

GRIPP HANDLE PAINTED

Exciting design element, the recessed grip painted in noble colors of stainless steel and dark bronze.
 Handle no.405 stainless steel
 Handle no.416 dark bronze

HANDLE 597.405 DRILLING

DIMENSIONS 320mm
 Matching handle for 587.405 with a longer drilling dimension of 320 mm.
 Only for horizontal handle position, handle 587.405 is automatically set for front widths less than 395 mm.

BAR HANDLE FOR TALL UNITS

New vertical bar handle in stainless steel with sleek feet and a stable, handy tube diameter of 16 mm. Surcharge handle only for tall cabinets with one-piece fronts or with division at carcass line height. Also available with powder coating.
 Handle no. 605.405 stainless steel
 Handle no. 606.xxx powder-coated

A variant of the same design with a drilling dimension of 192 mm is available for the standard handle range.
